

Do good. Lead great.

Every student's success is our mission. Saint Mary's University of Minnesota's values-driven curriculum helps guide future business leaders to embrace ethical leadership — and to do the right thing at every turn.

A Saint Mary's education readies you for the next step in advancing, changing or starting your career. With courses grounded in ethics and leadership and a practical future-ready focus, you will be able to help shape the future of business and technology and make the world a better place.

We keep a constant watch on the changing world of business, and our curriculum is guided by the needs of employers today and in the years ahead. You will develop strong skills and practical knowledge while deepening your values as they relate to how you will work, serve, lead, and live. In other words, you will be in the driver's seat, whether you are an undergraduate, an adult wanting to finish your degree, a graduate student, doctoral student, or someone seeking the turbo-lift of a certificate to enhance your career and your life.

"It is a big decision and requires a commitment to advance your education, and we promise to be there, along your specific path, every step of the way," said Dr. Michelle Wieser, dean of the School of Business and Technology. "Saint Mary's is known for its student-centered and values-driven approach, and we always begin with you — who you are, where you want to go, and what you want to do and become. We serve learners of all ages."

For adult learners.

Saint Mary's is ranked in Minnesota's **"Best Master's Online Business Programs"** by *U.S. News & World Report, 2022*. Our online accelerated MBA program has an unrivaled ROI. Students advance their careers in less than 12 months (much faster than a standard MBA program) and earn a highly-respected credential of an MBA from Saint Mary's.

Many of today's working professionals, facing a rapidly changing workplace, are choosing to reskill or upskill, and we have many options. One is our "Saint Mary's Accelerators"

for those looking for that quick lift. Thirteen graduate certificates are available at the master's level, and they are designed to help you change or advance your career quickly. With a completed certificate, you can earn a digital badge to showcase your new skills to current and future employers. Our students have countless stories about how they were able to leverage their new education into bigger and better opportunities — and later choose to stack certificates with credit toward a full degree.

Undergraduates are well prepared to lead and serve.

The world is changing at a rapid pace. Young people today don't know a world before smartphones. They are brand loyal, native digital users, and fascinated by the latest tech and business gurus. They also want a world that is just, fair, and guided by the golden rule.

No one knows this better than the School of Business and Technology as students make the most of their time at our undergraduate campus in Winona, Minn. Our students are learning business and technology skills like social media marketing, data analytics, cybersecurity, and more. These are high-demand skills needed to keep up with an evolving business world. Additionally, all courses are infused with ethics and values, so employers get not only graduates with great talent and skills but also leaders, who make decisions that support positive growth in their industry, the community, and society.

A degree from Saint Mary's assures graduates they are prepared for their first job, that they'll stand out to potential employers, and that they'll continue to excel in their fields. Saint Mary's alumni know they can go anywhere. And they do.

But what truly stands out is how they carry out their work and demonstrate ethical leadership through compassion, critical thinking, and integrity. Students are empowered to lead an ethical life of leadership. They know the difference between making a living and making a life.

"Business needs leaders who can adapt, change, and innovate. Leaders who can ensure that as business and technology evolve, it does so in ways that are ethical, inclusive, and equitable for all," said Dean Wieser.
